

# Lift Station 87 Phase 3 Construction

## Minimizing Impacts

The Lift Station 87 Project is an investment in resilient, reliable infrastructure for all City of Sarasota residents. However, these long-term benefits can only be realized through construction, which will impact those living and traveling in the construction zone.

The Lift Station 87 project team heard resident concerns for impacts to homes and are addressing those concerns in Phase 3 by:

- Limiting the contractor to 200 feet of roadway impacts at a time (four to six houses on both sides of the road).
- Requiring temporary parking within the construction zone, eliminating off-site, remote parking.
- Requiring temporary, ADA-compliant pedestrian access to homes, so residents can walk to their front doors.
- Requiring mail, trash, recycling and other deliveries to continue without disruption.
- Requiring clean fill to speed construction, reduce the need for compaction, thereby minimizing vibration.
